

Dr. Correo Hofstad  
 Fred Hutch Cancer Center  
 Chair of the Sarcoma Program Head Search Advisory Committee  
 Dr. Evan Yu,

I am CMC Correo Hofstad USMC, interested in leading the Sarcoma Department at Fred Hutchinson Cancer Center. I possess the education, experience, and leadership qualities to instruct and improve sarcoma treatment worldwide.

**In 2017, I developed the current sepsis recovery program for Inpatient Palliative Care Services at Harborview Medical Center.**

The pH level measures the concentration of electrons (H+) within a substance. All lattice structures in the universe are composed of elemental matter held together by electron bonds, covalent, metallic, or ionic electron bonds. All flesh in the human body is composed of organic lattice structures that require STRONG electron bonds for optimum health. In sepsis cases, the patient's pH levels have dropped to a level where bonds within lattice structures break. When bonds within the skeletal and fascial systems disappear, calcium can no longer hold together a lattice structure. Sepsis patient's bones melt into calcium matter that will not bond to form solid matter. During the Summer and Fall of 2023, I participated in Operation Cancer Moonshot at Fred Hutchinson Cancer Center as a medical scientist training instructor. Most of my lectures, training, board work, and instruction focused on rapidly raising cancer patients' pH levels to strengthen bodies and drive out Pycnogonid parasites. Dr. CMC President Joseph Biden awarded me the rank of USMC Medical Commandant for my success during Operation Cancer Moonshot.

My pharmaceutical company, Virus Treatment Centers, manufactures products for sepsis recovery.

**In 2023, I developed the NFL's modern concussion protocol.**

Bones release nitrogen gasses upon traumatic impact. Concussions rapidly release nitrogen into the brain, forming large pockets that cause extensive brain damage. Fenugreek rapidly reduces brain inflammation and promotes the immediate release of nitrogen via flatulence and eructation.

My pharmaceutical company, Virus Treatment Centers, manufactures products for concussion protocol.

**In 2023, I developed Fred Hutchinson's modern dental plaque removal protocol.**

Pharmaceutical-grade acetone REDOXes and removes dental plaque without drilling. It can also be used with hard toothbrushes, dental picks, and polishing heads.

**In October 2024, the FDA approved my organic non-GMO plant-based sterile (red) bone marrow product, HuesOS.**

The conservation of mass law for physics and chemistry states that matter cannot be created or destroyed, only transferred. The human body produces no component contained in bodily fluids. All substances are obtained from nutritional intake and converted. Therefore, I recognized that all bodily fluids can be synthesized from plant matter. My grandmother Melody Bouck is a Peacekeeper ICBM commander. My grandfather, Mike Hofstad, is a Titan I and II ICBM commander. My grandparents taught me how to use advanced centrifuge processes.

I use government-sponsored [new] centrifuges to separate and enrich compounds found in plants for medical use. Using advanced centrifuge technologies, we synthesize human bodily fluids using enriched components extracted from plants. My products remain organic, as no additive chemicals separate chemicals or elements from our plant matter. Centrifuge slides come out in layers, from which the select substance is scraped out of the targeted layer.

HuesOS is an FDA-approved organic, non-GMO plant-based synthetic sterile bone marrow product from VirusTC. It contains plant proteins, fats, minerals, and enzymes required to fuel the growth of stem cells within the skeletal and fascial systems.

- HuesOS is mostly FDA-approved synthetic sterile fresh whole blood. My sterile fresh whole blood product “Verdura” contains sterile hemoglobin in the form of beta carotene from carrot juice. My fresh whole blood contains sterile plasma synthesized from hydrated bee wax. Hemoglobin and plasma are contained in platelets synthesized from lipids in corn grit.
- HuesOS contains many of my FDA-approved calcium, zinc, and magnesium supplements, Konupora.
- HuesOS contains stem cells, hormones, and enzymes from bamboo plants. Bamboo’s rapid growth can be attributed to Aspartic proteases (PhAPs), Gibberellin (GA), Auxin, Rhizome, and Nonstructural carbohydrates.
- HuesOS contains coconut fats. Coconut fats provide high alkaline calories for fueling the growth of the fascial system.
- HuesOS contains FDA-approved high-alkaline vegan collagen peptides that build muscular connective tissues and joints that resist viral absorption and cancer.
- HuesOS contains FDA-approved copper. Copper is an organic medical-grade antifungal that promotes reepithelialization and angiogenesis.

Virus Treatment Centers, my pharmaceutical company, manufactures products to replace bodily fluids.

*My presidential appointment by Dr. CMC President Joseph Biden to Medical Commandant of the US Marine Corps is evidence of my leadership capabilities at Fred Hutch Cancer Center.*
